

# ShopRover

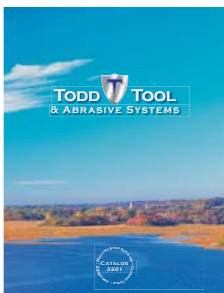

TODD TOOL

## Take Rover for a Walk!

### Introducing ShopRover...the Mobile Order Placement System

- ShopRover is a cordless barcode system that can store up to 600 scans before being uploaded to the software
- The user simply scans the item and quantity barcodes, uploads the scans into the ShopRover software, and places the order
- The system is completely safe and secure; it requires an Internet connection for the sole purpose of sending orders via email attachments
- You supply the product usage data and Todd Tool does the rest, including scanner set-up, software installation, and barcode label printing
- Barcode labels are industrial strength to hold up at the point of use. A customized Popular Items catalog with barcodes is also provided.
- Items and quantities can also be typed into the ShopRover software. Part numbers can be taken from our Catalog 3201 and Catalog 3402.
- ShopRover runs on the Windows XP or Vista computer of your choice
